Senior Software Engineer with 5 years of experience in building scalable distributed systems

PROFESSIONAL EXPERIENCE

Software Engineer III, Billing and Payments

Jun 2023 – Present

Copart, Inc.

Dallas, TX

- Engineered the restructuring and revamp of Member Billing and Payments microservices, driving \$3B in annual revenue and decommissioning the legacy system, further eliminating \$10M in annual licensing costs
- Led a team of junior developers in integrating with Super Dispatch, expanding Copart's delivery network, and increasing annual delivery commissions by 67% from \$900K to \$1.5M
- Drove the adoption of a canary deployment strategy for critical business flows, reducing API failures by over 70% during high server loads and DDoS attacks by rerouting critical traffic to a dedicated server pool.
- Drove a 15% reduction in application startup time and significantly enhanced overall efficiency by implementing a strategic multi-threading approach by parallelizing independent application initialization tasks

Software Engineer Intern

Jan 2022 – Aug 2022, Jan 2023 – May 2023

Copart, Inc.

Dallas, TX

- Reduced fatal runtime exceptions in the payment microservices by 80% through refactoring of the event-based framework, by enforcing good coding standards and explicit type-casting of event request/response bodies
- Facilitated early detection of potential payment fraud by implementing efficient asynchronous Kafka pipelines, seamlessly integrating proactive alert mechanisms with minimal computational overhead
- Reduced weekly manual discrepancy resolution work for resolving vehicle-delivery data inconsistencies by over 60% by engineering batch jobs to mitigate API failures and prolonged vendor response times

Software Engineer

Jul 2018 – Dec 2020

Citicorp Services India Private Limited

India

- Drove an 80% reduction in data mismatch across FX sales systems by consolidating information from diverse sources into a unified pipeline, enhancing data consistency and integrity
- Pioneered a proof of concept for decoupling inter-application communication to reduce code redundancy across applications, crafting a unified inter-platform messaging microservice adept at cross-protocol communication
- Achieved a 10% reduction in latency diagnosis for data intensive applications through the development of a dashboard monitoring critical performance metrics of stored procedures and triggering alerts when necessary

KEY TECHNICAL SKILLS

Technologies

Java, Python, TypeScript, Node.js, SQL, Apache Solr, MongoDB

Frameworks/Libraries

Spring Boot, JPA, Hibernate, AWS, Angular, React, Apache Kafka

CI/CD Tools

Jenkins, Docker, Kubernetes, Spinnaker, TeamCity, UDeploy

EDUCATION

The University of Texas at Dallas

Dallas, TX

MS in Computer Science (GPA: 3.8/4)

National Institute of Technology Tiruchirappalli

India

B.Tech, Engineering

PERSONAL PROJECTS

DavisBase DB Engine | ([GitHub](#))

- Developed a comprehensive console-based RDBMS with support for fundamental commands like Insert, Select, Update, and Delete, encompassing all basic MySQL datatypes
- Implemented an innovative file-per-table storage paradigm, organizing tables into pages based on column datatypes for efficient and structured data storage

RNN for Machine Translation | ([GitHub](#))

- Developed an encoder-decoder RNN framework by evolving a basic neural network, successfully training the model for English-French sequential translations using 10% of the WMT'14 en-fr dataset
- Achieved a 32% reduction in initial training and test losses by implementing optimizations in model construction and strategically fine-tuning hyper-parameters
